

# Bulletproof Your Network with a Security Assessment

## The Fastest Way to Expose Threats & Vulnerabilities

Don't develop your IT security strategy based on a "feeling" of how your network stacks up. Request a Security Assessment to get a concrete, in-depth summary of where your network is succeeding, and where it is lacking. **With a Security Assessment you can:**

Receive a comprehensive vulnerabilities scan

Perform external vulnerabilities scan with comprehensive output

Assess computer risk at a high level with the Security Risk Report Card

Get a full review of your security policies

Perform internal vulnerability scans with the add-on Inspector appliance

Highlight outbound security deviations from industry standards

Search for PII and receive a data breach liability report

Methodically analyze login history to spot anomalous activity

To schedule your assessment, contact us at [info@ontech.com](mailto:info@ontech.com) for an initial evaluation to develop a pricing quote.

This security analysis is not all-encompassing. However, the results of this analysis may prompt additional recommendations that are focused on specific aspects of your environment. EX: PCI HIPAA audits, in-depth anti-virus testing, firewall/router audit, etc.
