Key Features

PHISHING SIMULATOR

Webroot provides an ever-expanding, topical, phishing template library that is regionalized for effectiveness and relevance. Randomization ensures realistic engagement and testing via realistic phishing scenarios.

TRACKABLE, FULLY CUSTOMIZABLE TRAINING COURSE CAMPAIGNS

Our built-in LMS keeps track of every user's participation, making all cyber security education accountable and measurable.

FULL COURSE, CAMPAIGN AND CONTACT MANAGEMENT

Users are imported via Active Directory LDIF, CSV files, or web-based form. Tags allow admins to group users by location, department, business unit, or other category to streamline assigning training.

FIVE-STEP WIZARD

The wizard reduces the time and cost of administering cyber security education programs. Plus, the automated campaign scheduler means you can organize ongoing programs and reports in minutes.

SCHEDULED REPORTING CENTER

Receive phishing campaign statistics and generate per-user action and other reports to measure progress and ROI. Our Campaign Executive Summary Report highlights the campaign data and results of the training.
